

Inline Finishing with RSP System 2.0

- creasing
- cutting
- kiss cutting
- perforating

in your offset press

RSP System 2.0 – Better. Quicker. More reliable.

The new generation of RSP System 2.0 features a specially developed locking hinge (the base plate has been redesigned), which doesn't just make operation more effective, it also reduces makeready time. By using the RSP System 2.0 you will improve your machine's performance and therefore its output.

Our Research and Development team have also reduced the height of the base plate and the number of screws. This enhancement gives you much greater reliability. We have also improved the few remaining screws to ensure a longer lifespan for your base plate.

Accurate. More accurate – the direct fit RSP flexible die.

The introduction of our improved RSP System 2.0 also enables you to fix a flexible die directly onto the base plate, in addition to the cost-effective RSP grid sheet. The easy-to-install direct fit RSP flexible die guarantees best reproduction of shapes with maximum accuracy. The RSP direct fit flexible die has a register adjustment of up to 1.5 mm in any direction, thus improving operator convenience and the quality of your products.

Innovation that will delight you!
